Amber People

SENIOR SOFTWARE ENGINEER

NEW YORK

$150,000 - $205,000

ROLE BACKGROUND

We're looking for a self-motivated, highly driven Senior Software Engineer to bolster our development team. Our team is focused on building applications to facilitate and support a new communication channel for marketers.

THE ROLE

- You have worked professionally with web technologies for 5+ years with experience on a single application long enough to see the consequences of your decisions.
- You have a proven track record of building applications that maintain a high bar of quality.
- You understand how to negotiate with Product Management to meet the user's needs without sacrificing quality or accruing tech debt. You deeply loathe regressions and take proactive steps to protect against them through a variety of testing techniques.
- You are excited by new technologies but are conscious of choosing them for the right reasons.
- You are constantly improving the quality of the project you are working on, both via code contributions as well as long-term advocacy for larger scale changes.
- You are enthusiastic about the high impact, fast-paced work environment of an early stage start-up

PRODUCT DEVELOPMENT

- Our backend is Java and Python microservices coupled with DynamoDB, Kinesis, AirFlow, MySql, Postgres, and Redis. Our frontend is built on current best practices leveraging Babel, Webpack, React, and Redux.
- Our team is 90+ engineers, product managers and designers from top tech companies including Google, Microsoft, Twitter, Moat, Oscar and AppNexus.
- We believe our company will win in the long run through product innovation. To get there, we obsess over iteratively delivering customer value through rapid prototyping and data driven decision making.
